

Practical Assessment: QSR Menu Change Request (CR)

Objective

In the Quick Service Restaurant (QSR) industry, updating a menu item's price or availability across digital kiosks requires strict governance to avoid financial errors.

Your task is to build a lightweight, full-stack Menu Change Request (CR) Tracker that captures a menu modification request from a form, moves it through a one-level approval workflow and displays it in an approved queue.

Tech Stack Options:

- **Database:** Microsoft SQL Server (MSSQL) (Compulsory)
- **Backend:** Node.js (Express) **OR** Python (FastAPI/Flask) **OR** C#
- **Frontend:** Vanilla JS / HTML / CSS **OR** Angular

Assignment Requirements

- Unique request tracking.
- Capturing the change details (e.g., Item Name, Change Type like *Price Update* and the New Value).
- State management tracking the status (Pending, Approved or Rejected).

Submission Deliverables

Please package your solution into a clean directory containing:

1. **schema.sql:** The SQL script containing your table DDL and constraints.
2. **Backend Source Code:** Your Node.js or Python or C# server files including database connection setup.
3. **Frontend Source Code:** Your HTML/CSS/JS or Angular project components.
4. **README.md:** Brief, clear setup instructions on how to configure your database connection string and boot up the application.

Evaluation Criteria

The submission will be evaluated based on:

- Functional completeness and correctness.
- Clean code organization and project structure.
- Appropriate use of layers (Controllers, Services, Repositories, etc., where applicable).
- Database design, constraints and data integrity.
- Input validation (client-side and/or server-side).
- Secure database access (parameterized queries or ORM to prevent SQL injection).

- Meaningful error handling and appropriate API responses.
- Code readability, maintainability and naming conventions.
- A clean, intuitive and usable UI.
- Clear README.md with setup and configuration instructions.

All submissions should be emailed at srishti.mehrotra@sapphirefoods.in.
